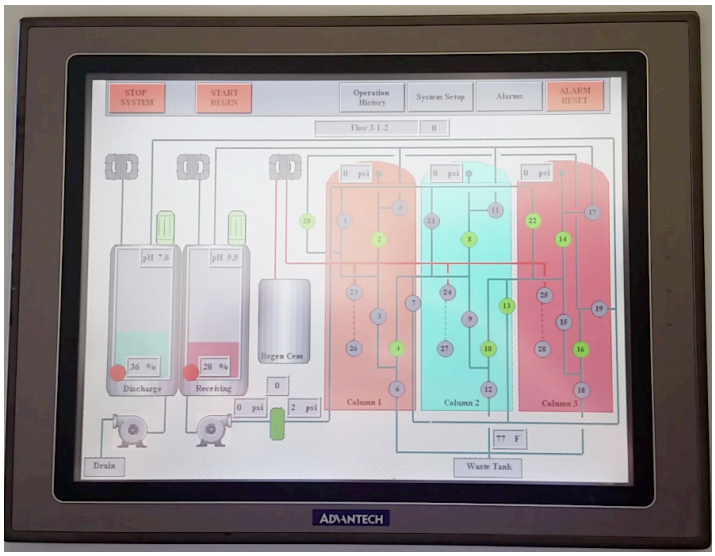
Metal Treatment System (MTS-15) 15gpm


Fully automatic self-regenerating Heavy Metals Ion Exchange waste water treatment system for water discharged to the sewer. The system is designed to remove all heavy metal contaminates. The Allen-Bradley Micrologics PLC will monitor and control flows, pH, pump operation, solution levels, filter pressures and regeneration valve sequencing of the system. The System contains a 12" HMI touch screen to monitor and control all operations.
